Hruthi Muggalla

Software Engineer (Full Stack) | React, Node.js, ML | Former Intern
@ SAP Labs, Baker Hughes | MS CS @ UGA '26
Athens, Georgia, United States

Summary

Full Stack Software Engineer and Master's student in Computer Science at the University of Georgia (Class of 2026), with experience building scalable, production-grade applications across frontend and backend systems.

Previously a Software Engineer Intern at Baker Hughes and SAP Labs, where I built features using React, Angular, Node.js, and REST APIs, reduced page load time by 20%, improved delivery speed by 30%, and achieved 98% code reliability through robust testing and CI/CD pipelines (Jest, Jasmine, Jenkins).

I also bring applied machine learning experience from both industry and graduate coursework. During a Data Analyst internship, I developed an ML-based currency detection system for invoicing workflows, improving accuracy by 30%. My Master's coursework includes Machine Learning, Data Mining, and Advanced ML, where I worked with large, imbalanced datasets, built classical and deep learning models (LSTM, CNN), and explored LLM-augmented semantic feature engineering for real-world data problems.

I'm actively seeking full-time and internship opportunities in software development, where I can contribute to impactful products, work on scalable systems, and continue growing as a software engineer.

Experience

Sailotech

Data Analyst Intern

May 2025 - July 2025 (3 months)

Hyderabad

- Built an ML-based automation feature for an invoicing system that dynamically detected buyer/seller countries and applied the correct currency, improving processing accuracy by 30%.

- Designed and analyzed data workflows using Excel (Power Query, Pivot Tables), Power BI, and Python, optimizing reporting speed by 25%.

Baker Hughes

Software Engineer Intern

January 2024 - July 2024 (7 months)

Mumbai

- a. Developed high-performance web components using Node.js and Angular, reducing page load time by 20% through efficient API design.
- b. Wrote 50+ unit test cases using Jest and Jasmine, achieving 98% code reliability and ensuring seamless CI/CD integration via Jenkins.
- c. Improved feature delivery timelines by 30% through Agile practices and effective backlog management.

SAP Labs India

Associate Software Developer

May 2023 - July 2023 (3 months)

Bengaluru

- a. Created an Invoice List Application using SAP UI5 for enhanced invoice management, reducing manual entry time by 40%.
- b. Developed a Travel Desk Platform integrating SAP UI5 with ABAP, ensuring smooth interaction and handling 500+ transactions weekly during testing.
- c. Optimized backend processes within the SAP ecosystem, improving application responsiveness by 30%.

Education

University of Georgia - Franklin College of Arts and Sciences

Master's degree, Computer Science · (2024 - 2026)

National Institute of Technology Rourkela

Bachelor of computer science and engineering , Computer Science · (2020 - 2024)

DPS Modern Indian School - Doha, Qatar

Intermediate, PCM, Computer science
